

## TIPS ONLY - INSTRUCTIONS PRINTED ON AIRPAD 2

### Important Tips

1. Hold the Windcatcher valve open by grabbing the **GRAB HERE** ends and pushing them towards each other.

2. Always take deep, strong breaths.
  - Inhale slowly & fully
  - Exhale completely like you are blowing out birthday candles or a fire.

**REMEMBER:** Don't forget to keep your distance while exhaling (see instructions)

3. Having trouble fully inflating (100 percent)?

#### After pad is mostly inflated...

- a. Grab the valve closer to the center, to create a smaller opening.
- b. Hold the small opening against your face.
- c. Continue blowing into the valve **till pad is full**. Roll tightly to seal

4. Too much air or too firm?  
Use the ordinary valve in the right corner of the air pad to adjust fullness.

- ?** Want to know how long it would take to inflate an air pad this size without using Windcatcher Quickstream Inflation?
  - a. With air pad deflated, roll up the Windcatcher valve and secure with G-Hook.
  - b. Try inflate using only the valve in the corner.
