

To be sure, determining the right size walking stick or cane can be a subjective art form. What feels right for one person may feel horrible for another. However, with almost two decades of experience in making handcrafted, wooden walking sticks and canes, you can be sure that we have some opinions on the matter!

Walking Sticks

- For small children and shorter adults, we generally recommend a 41-inch stick.
- For people who are shorter than 5'4", we recommend a 48-inch stick.
- For people who are between 5'4" and 5'11", we recommend a 55-inch stick.

Again, let me reiterate, the sizing recommendations listed above are only suggestions. For people needing step-by-step support, it's best to consult your doctor or another medical professional about your exact sizing needs.
