

1. Start by setting up the “feet” that will balance the WrapStand vertically. Insert one side of a wire holder into the lowest slot. Squeeze the other side of the wire towards the center and insert the end into the opposite slot on the base.

2. Repeat on the other side so the base stands on a flat surface. Make sure the wire is pointing the right direction (see below).

3. Load your heaviest kitchen wrap onto the bottom wire holder and insert another wire above the wrap. Leave enough space to remove and replace the wrap as needed. For a bag dispenser, place the wire as close as possible to the box in order to trap and hold it in place. Make sure to position the bag opening (or create a bag opening) so it’s facing out.

4. Repeat this process with the remaining wire holders.

5. To remove, simply push one side of a wire toward the center of the base and pull outwards.
